

Untitled

Quarto

μ

Quarto enables you to weave together content and executable code into a finished document. To learn more about Quarto see <https://quarto.org>.

Running Code

When you click the **Render** button a document will be generated that includes both content and the output of embedded code. You can embed code like this:

```
1 + 1
```

```
[1] 2
```

You can add options to executable code like this

```
[1] 4
```

The `echo: false` option disables the printing of code (only output is displayed).

Hide source code:

```
[1] 2
```

Hide text output (you can also use `results = FALSE`):

```
print("You will not see the text output.")
```

Hide messages:

```
message("You will not see the message.")
```

Hide warning messages:

```
# this will generate a warning but it will be suppressed  
1:2 + 1:3
```

```
[1] 2 4 4
```

Hide plots:

```
plot(cars)
```

Note that the plot will be generated in the above chunk. It is just not displayed in the output.
